SUMMARY

Senior Flutter Engineer with **7+ years of experience** building and scaling high-performance mobile applications and games from concept to live operations.

Delivered and scaled products reaching **12M+ downloads** worldwide, including 5M+ download titles and award-winning products, including **Google Play Best of 2021** and **Indie Games Fund 2023** selections.

Deep expertise in Flutter rendering internals, modular architecture, asynchronous state management, and performance optimization for production-scale environments.

EXPERIENCE

Co-founder & Senior Flutter Engineer

Blu Studios

2019 - 2026

Co-founded and led engineering for a mobile product studio that built and scaled applications reaching 12M+ global downloads.

Owned end-to-end development of multiple production mobile apps from concept to release, serving millions of active users.

Collaborated closely with product, design, and analytics teams to iterate on user experience, improve retention, and ship high-impact product features.

Architected scalable Flutter mobile platforms enabling rapid product iteration while maintaining strong performance and reliability across Android and iOS devices.

Key engineering contributions:

- Designed scalable mobile architecture supporting large feature surfaces, including real-time updates, hierarchical data
- structures, and offline-capable client synchronization.
- Implemented complex UI systems, including dynamic lists, real-time updates, and highly interactive interfaces, while
- maintaining consistent frame performance.
- Reduced ANR rate from ~30% → <2% through deep production debugging, including memory profiling, thread analysis,
- and rendering pipeline optimization
- Reduced APK size by 45% through asset pipeline redesign and build configuration optimization
- Improved D1 retention from ~25% → ~40% through performance improvements and analytics-driven product iteration
- Designed Firestore data models and scalable backend infrastructure supporting millions of users with optimized read/
- write strategies
- Implemented Flutter platform channels and native plugins in Swift and Kotlin for performance-critical platform
- integrations
- Built CI/CD pipelines and automated deployment workflows using CodeMagic, Fastlane, and Firebase App Distribution
- Performed advanced mobile performance debugging, including UI/Raster thread profiling, frame budget analysis, and
- memory leak detection
- Optimized applications for low-end Android devices, improving frame stability and reducing memory pressure

---

Desktop Engineer

VX Case

2018 - 2019

Enterprise software company focused on e-commerce and retail solutions.

- Developed desktop applications using TypeScript, Angular, and VTEX.
- Built reusable UI components, improving maintainability and scalability.
- Collaborated with senior engineers to integrate frontend and backend systems.
- Contributed to performance improvements and design consistency.

SELECTED PROJECTS

Magic Sort - Indie Games Accelerator 2024 Winner

Hybrid casual puzzle game developed in partnership with Wildlife Studios. Selected for the Google Play Indie Games Accelerator 2024 program, with 1M+ downloads and live-ops driven monetization systems.

- Architected high-performance Flutter UI enabling smooth gameplay on low-end Android devices.
- Built monetization pipelines using Firebase Remote Config and A/B testing, improving engagement and revenue performance.
- Architected and stabilized a high-performance Flutter codebase optimized for low-end Android devices, focusing on rendering efficiency, memory footprint reduction, and frame stability through deep profiling and refactoring.
- Implemented event-driven state management and feature isolation to support scalable Live Ops releases.

Rabit - Google Play Best of 2021

Gamified habit tracker that reached 5M+ downloads and ranked #2 App of the Year 2021 (Google Play Brazil).

- Developed engagement systems including push notifications, streak logic, and Firestore sync
- Implemented retention features improving long-term user engagement
- Built animated UI systems optimized for Flutter performance

---

Capy - Self-Care Pet – AI-Powered Virtual Wellness Companion

AI-powered self-care mobile application featuring a virtual pet driven by OpenAI APIs, combining habit tracking, mood journaling, and intelligent conversational interactions.

- Built scalable daily engagement loops using push notifications and behavioral tracking, improving retention and reinforcing consistent user habits.
- Led high-performance UI architecture.

SKILLS

Core Engineering

Flutter | Dart | Clean Architecture | SOLID | DDD | TDD | KISS | DRY | OOP | Design Patterns | State Management | BLoC | Cubit | Riverpod | Provider | GetX | MobX | REST APIs | WebSockets | Unit Tests | Widget Tests

---

Architecture & Backend Systems

Feature-First Architecture | DI | GetIt | Modular | Provider | Supabase | Isar Database | Hive Database | Drift Database | Firebase Auth | Firestore | Remote Config | Analytics | Crashlytics | Realtime Database | FCM | Firebase Cloud Storage | Platform Channels | Android | iOS

DevOps, Observability & Production

CI/CD Pipelines | CodeMagic | Fastlane | Firebase App Distribution | Git | GitHub | Build Flavors | Performance Optimization | Crash & ANR Reduction | Memory Leak Debugging | NewRelic | Optimizely | Braze | Rive

EDUCATION

Bachelor's Degree in Software Engineering

Universidade Católica do Salvador

Relevant focus: Software architecture, data structures, algorithms, object-oriented programming, databases.

Technical Course in Computer Networks

SENAI CIMATEC

Focus on network infrastructure, communication protocols, device connectivity, and network administration.

English Language Program

Alternative Language Learning (ALL)

Intensive English program covering speaking, writing, listening, and professional communication.
